                                                                          The present invention provides the protein and coding sequences of 3 variants of a human cytokine receptor. The sequences can be used in the diagnosis, prevention and treatment of immune diseases, including psoriasis, cancer chronic/life-threatening infections, rheumatoid arthritis, multiple sclerosis, Crohn's disease, ulcerative colitis and transplant rejection and in reproductive medicine, e.g. for diagnosing abnormal immune reactions which cause abortions. The present sequence is

bullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis, corviral and bacterial infections, Alzheimer's disease, asthma, arthritis, corviral sease, schizophrenia, sby442445PROa-associated disorders, corviral rejection, corviral psorials, inflammatory bowel disease, transplant rejection, corviral disease, ischaemia, stroke, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, atherosclerosis, corviral disorders including parasupranuclear palsy, myotonic dystrophy, corviratory diseases including parasupranuclear palsy, myotonic dystrophy, corviratory diseases including chonic obstructive pulmonary disease, cordivasese, cardiovascular concluding hypercholesterolaemia, hypertriglyceridaemia, cirrhosis, viral concluding hypercholesterolaemia, hypertriglyceridaemia, cirrhosis, viral concluding acute and chronic renal failure, glomerulonephritis, Fanconi's conditional hypercholesterolaemia, scheletal muscle disorders including hypoglycaemia The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoietic treating cancers, infections, autoimmune disorders, haematopoietic disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital muscular dystrophy, junctional epidermolysis Claim 2; Page 98; 138pp; English. and tendinitis, gastrointestinal diseases including intestinal obstruction and tropical sprue, spleen disorders including hypersplenism, Hodgkin's disease and malignant lymphoma, testicular cancer, male reproductive diseases including low testosterone and male infertility. is human cytokine receptor gene

Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth abnormalities

Claim 2; Page 98; 138pp; English.

The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for treating cancers, infections, autoimmune disorders, haematopoietic disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis, viral and bacterial infections, Alzheimer's disease, asthma, arthritis, septicaemia, psoriasis, inflammatory bowel disease, transplant rejection, graft verse host disease, ischaemia, stroke, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases, atherosclerosis, brain disorders including congestive heart failure and myocardial infarction, respiratory diseases including chronic obstructive pulmonary disease, acute bronchitis and adult respiratory distress syndrome, criticular expiratory disease including acute and chronic renal failure, glomerulonephritis, Fanconi's syndrome, cystinuria, skeletal muscle disorders including hypoglycaemia and tendinitis, gastrointestinal diseases including hypoglycaemia and tendinitis, sastrointestinal diseases including hypoglycaemia

                                                                                                                                                                                                                                                            useful in drug screening to identify compounds having binding affinity to the receptor subunit. Modulators of DCRS are useful for modulating the physiology or development of a cell or tissue culture cells. A CC purified DCRS is useful as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or CC immunological disorders which lead to production of antibody to the cendogenous receptor. Cytokine receptor sequences are useful as probes CC for detecting levels of the cytokine receptor in patients suspected of CC having an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for isolating DCRS proteins and peptides, to screen expression libraries for particular expression products, to raise anti-idiotypic antibodies and CC constitution of the protein or cells which express the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PR XXX PR XX PR XXX PR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                treating cancers, infections, autoimmune disorders, hamatopoletic disorders, wound healing disorders, cholesteryl ester storage disease, inflammation, congenital muscular dystrophy, junctional epidermolysis bullosa, Parkinson's disease, Huntington's chorea, multiple sclerosis, viral and bacterial infections, Alzheimer's disease, asthma, arthritis, allergies, schizophrenia, sbg44245PROa-associated disorders, septicaemia, psoriasis, inflammatory bowel disease, transplant rejection, graft verse host disease, ischaemia, stroke, acute respiratory disease syndrome, restenosis, brain injury, AlDS, bone diseases, atherosclerosis, restenosis, brain injury, AlDS, bone diseases, atherosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                               brain disorders including parasupranuclear palsy, myotonic dystrophy, depression, anxiety disorders and sleep disorders, cardiovascular diseases including congestive heart failure and myocardial infarction, respiratory diseases including chronic obstructive pulmonary disease, acute bronchitis and adult respiratory distress syndrome, liver disorders acute bronchitis and adult respiratory distress syndrome, liver disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to secreted and membrane-associated polypeptides and polynucleotides. The sequences of the invention are useful in diagnostic assays for detecting diseases associated with inappropriate activity or levels of these polynucleotides, and in identifying their agonists and antagonists that are potentially useful in therapy. The sequences of the invention are useful as vaccines for inducing immunological response. The sequences of the invention are useful for
                                                                                                                               Sequence 645 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel secreted and membrane-associated polypeptides and polynucleotides useful for preventing, ameliorating or correcting dysfunction or disease including diabetes, cancer, hypertension and growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 2; Page 97; 138pp; English.

                                                                                                                                                                                                                                                                                                                     Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is human DNAX cytokine receptor subunit 4.1 cCC (DCRS4.1) cDNA. DCRS4 gene is located on chromosome 6924.1-25.2. CC (ytokine receptors, fragments and antibodies are useful for treating commonological disorders. DCRS3 (50R), DCRS4 (cytor) or fragments are useful in drug screening to identify compounds having binding affinity cc to the receptor subunit. Modulators of DCRS are useful for modulating ct the physiology or development of a cell or tissue culture cells. A CC purified DCRS is useful as a reagent to detect antibodies generated in CC response to the presence of elevated levels of expression, or CC endogenous receptor. Cytokine receptor sequences are useful as probes for detecting levels of the cytokine receptor in patients suspected of CC conductors which lead to production of antibody to the cytoking an immunological disorder. Antibodies have therapeutic value, are useful as potent antagonist, in detecting or quantifying ligands, for CC cuseful as potent antagonist, in detecting or quantifying ligands, for CC cuseful as proteins and peptides, to screen expression libraries for CC particular expression products, to raise anti-idiotypic antibodies and expression of the protein or cells which express the protein.

The present sequence is human DNAX cytokine receptor subunit 4.2 (C (DCRS4.2) reverse translational DNA. DCRS4 gene is located on C (DCRS4.2) reverse translational DNA. DCRS4 gene is located on C (DCRS4.2) reverse translational DNA. DCRS4 gene is located on C (DCRS4.2) reverse for treating immunological disorders. DCRS3 (50R), DCRS4 (cytor) C (D inding affinity to the receptor subunit. Modulators of DCRS4 are useful c (D inding affinity to the receptor subunit. Modulators of DCRS are useful C (D inding affinity to the presence of evelopment of a cell or tissue culture C (D inding affinity to the presence of evelopment of a cell or tissue culture C (D inding affinity to the presence of elevated levels of expression, C (D inding affinity to the presence of elevated levels of expression, C (D inding affinity to the presence of elevated levels of expression, C (D inding affinity to the presence of elevated levels of expression, C (D inding affinity to the cytokine receptor sequences are useful as probes (D inding and protein and disorder. Antibodies have therapeutic value, are C (D isolating DCRS proteins and peptides, to screen expression libraries for C (D isolating DCRS proteins and peptides, to screen expression libraries for C (D isolating DCRS proteins and peptides, to raise anti-diotypic antibodies and C (D isolating DCRS proteins and peptides, to raise anti-diotypic antibodies and C (D isolating DCRS) and DCRS proteins and peptides, to screen expression libraries for C (D isolating DCRS) and DCRS proteins and peptides, to screen expression libraries for C (D isolating DCRS) and DCRS proteins and peptides, to screen expression libraries for C (D isolating DCRS) and DCRS proteins proteins and DCRS proteins proteins proteins proteins proteins pr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
